with a control panel on its back side and is rotatably supported on the main body by double hinge mechanisms such that the projector is box-shaped when the front cover is stored in a storage position for covering the front side of a projection lens, and a surface of the front cover is inclined and directed to the rear upper side of the projector main body when the front cover is rotated from the storage position to an open position. Loudspeakers are incorporated in the cover so that the loudspeakers are projected at an upper portion of the main body when the front cover is rotated from the storage position to the open position.--

IN THE CLAIMS

Please amend claims 1-13 by rewriting same to read as follows:

*Ad*

---

--1. (Amended) A projector, comprising:  
a box-shaped projector main body;  
a projection lens exposed on a front side of said projector main body;  
a front cover for covering and uncovering a front side of said projection lens; and  
a pair of double hinge mechanisms for rotatably supporting both a left end portion and a right end portion of said front cover on said projector main body,  
wherein: each of said double hinge mechanisms include:  
first and second parallel hinge pins, an end of said
